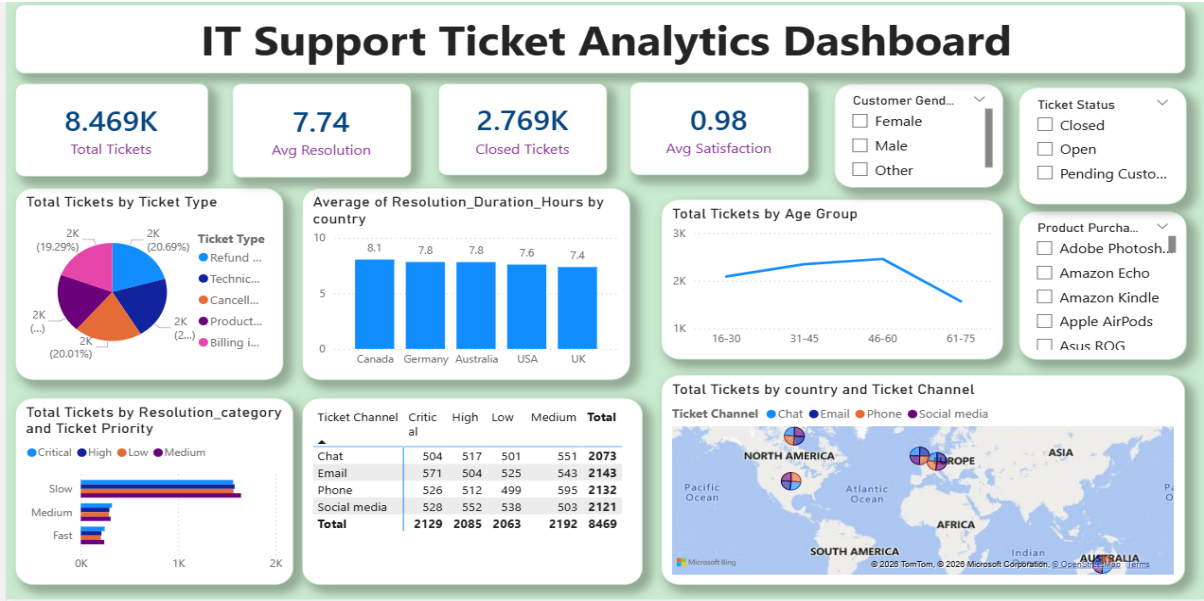
Milestone-4: Reporting and Presentation:

Tasks:

1. **Final visual PowerBI dashboard**



KPIs

- Total Tickets (8.469K): Total number of IT support tickets raised.
- Avg Resolution (7.74): Average time taken to resolve tickets (in hours).
- Closed Tickets (2.769K): Total number of successfully closed tickets.
- Avg Satisfaction (0.98): Average customer satisfaction rating score.

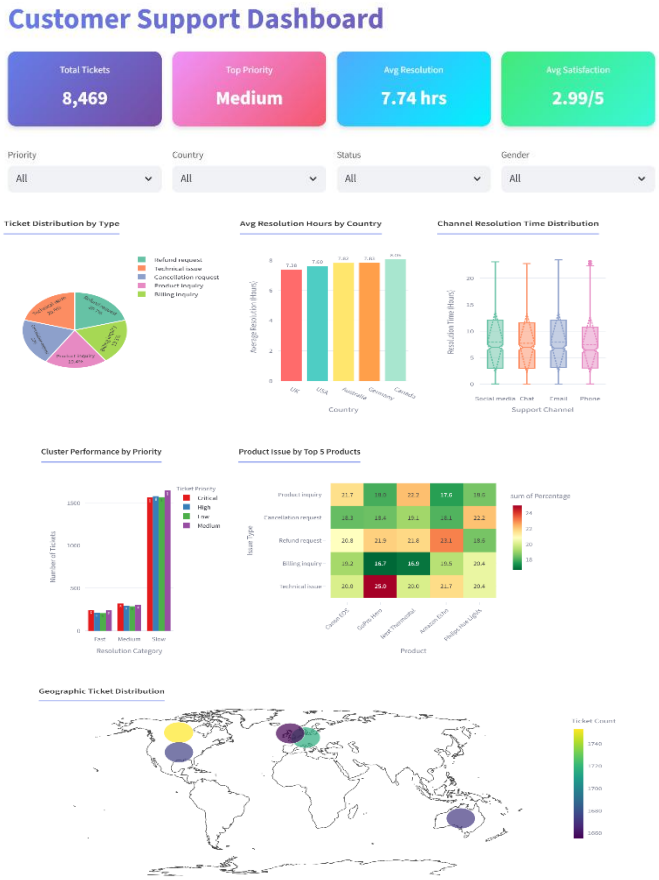
Charts

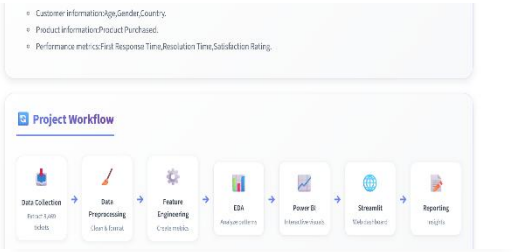
- Total Tickets by Ticket Type: Shows distribution of tickets across different issue types.
- Average Resolution Duration by Country: Compares average ticket resolution time across countries.
- Total Tickets by Age Group: Displays number of tickets raised by different customer age groups.
- Total Tickets by Resolution Category & Priority: Shows ticket count based on resolution speed (Fast/Medium/Slow) and priority level.
- Ticket Channel vs Priority Table: Summarizes ticket volume by communication channel and priority level.
- Total Tickets by Country and Ticket Channel (Map): Displays geographic distribution of tickets by communication channel.

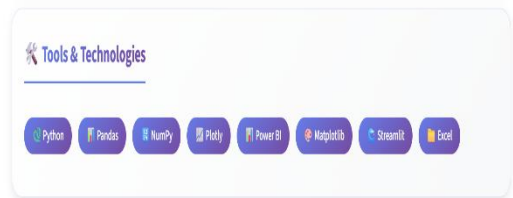
Filters

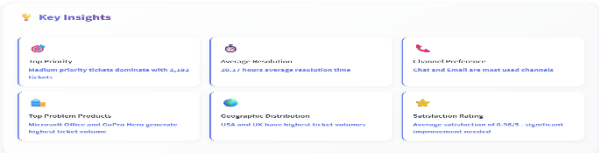
- Customer Gender: Filters tickets based on customer gender.
- Ticket Status: Filters tickets by status (Open, Closed, Pending).
- Product Purchased: Filters tickets based on the purchased product

2. Streamlit dashboard:









Charts

- Ticket Distribution by Type: Shows the proportion of tickets raised for different issue categories.
- Avg Resolution Hours by Country: Compares the average time taken to resolve tickets across countries.
- Channel Resolution Time Distribution: Displays how resolution times vary across different support channels.
- Cluster Performance by Priority: Shows how ticket resolution categories (Fast/Medium/Slow) perform across different priority levels.
- Product Issue by Top 5 Products (Heatmap): Highlights which top products generate the highest number of support issues.
- Geographic Ticket Distribution (Map): Visualizes the number of tickets raised from different global regions.

KPIs

- Total Tickets (8,469): Total number of customer support tickets recorded in the dataset.
- Top Priority (Medium): Indicates the priority level with the highest number of tickets.
- Avg Resolution (7.74 hrs): Average time taken to resolve customer issues.
- Avg Satisfaction (2.9/5): Average customer satisfaction rating after ticket resolution.

About This Project

- Project Overview: Explains the objective of analyzing customer support data to improve service performance and efficiency.
- Dataset Description: Describes the ticket data, customer details, product information, and performance metrics used in the analysis.
- Project Workflow: Shows the step-by-step process from data collection to visualization and reporting.
- Tools & Technologies: Lists the tools used such as Python, Pandas, NumPy, Power BI, and visualization libraries.
- Key Insights: Summarizes the major findings derived from the dashboard analysis.

Deliverables:

- Final visual dashboard
- Summarize findings in a final analytical report and presentation.
